Lateral view of a Zebrafish trunk at 3 days post fertilization

**2**  
 Natasha O'Brown  
 Harvard Medical School

3 day old fish larva with the neurons marked in magenta under the Huc promoter, skin marked in turquoise by an injected dye and green marking a subset of neurons

**3**  
 Michael Taylor  
 University of Wisconsin-Madison

Blood vessels were visualized from a live zebrafish larva using a transgenic line that labels all blood vessels with a fluorescent protein.
